

To Whom It May Concern,

I am pleased to recommend Kareeb Sadab for an Entry-Level Data Scientist, AI Engineer, or Junior Machine Learning Engineer position.

Kareeb served as the Chief Information Security Officer at Web3Discord.com (W3D), where he led application security initiatives and security reviews. He performed threat modeling using the STRIDE framework, conducted vulnerability assessments and security testing, supported security awareness and secure development practices, and collaborated with development teams to improve application security.

He also supported data collection, web scraping, AI automation, KPI reporting, website development, software and bug testing, and other technical projects. Kareeb provided Level 2 ticketing support, end-user support, and internal technical support for our team. He handled technical questions in a friendly and professional manner and worked closely with team members and developers to resolve more complex issues.

His experience includes Python, SQL, Pandas, NumPy, Scikit-learn, Flask, FastAPI, data cleaning, feature engineering, machine learning model evaluation, REST APIs, and model deployment. His security and development tools include Burp Suite, the OWASP Top 10, STRIDE, Git, and GitHub.

Kareeb also managed and moderated Web3 communities and worked with Discord, Zealy, and Galxe to support community engagement and online campaigns.

He worked very well within our team, communicated clearly, accepted feedback, and collaborated effectively with both technical and non-technical team members. He was dependable, willing to learn, and capable of managing both individual responsibilities and team-based projects.

His combination of technical knowledge, security experience, data skills, teamwork, and strong work ethic makes him a strong candidate for an entry-level position in data science, AI, or machine learning.

I confidently recommend Kareeb and believe he would be a valuable addition to any technology team.

Sincerely,

Thomas Burkhardt
